

ABSTRACT

A ceiling lamp junction box/lamp rod folding installation structure comprises a junction box and lamp rods hinged to the junction box. The junction box has a plurality of portals arrayed along its circumferential surface. Aligned with the portal a carrier mount having a reticulation prefabricated coupling section on each of its two ends, thereby providing for the insertion of a pin to movably dispose a swivel block and the insertion of a pin through the other end of the carrier mount to constitute a latch mechanism. The swivel block has a rack surface along one side, the notches of the rack surface provide for engagement with a side corner of a check block. As such, the lamp rods and the junction box in the hinged state provides for the turning of the lamp rods to reduce the space occupied during shipment.
